portion of rental payments directly to landlords, while easing the voucher holder’s contribution—typically 30% or less of their household income. In 2018, 63% of program participants reported an annual income less than $15,000 and the median length of voucher use for nonelderly and non-disabled recipients is approximately four years.\textsuperscript{12}

As of December 2018, 18% of HCV heads of household are Hispanic.\textsuperscript{13} PHAs in eight states (Arizona, California, Colorado, Connecticut, New Mexico, North Carolina, Pennsylvania and Texas) report that 50% or more of their HCV beneficiaries are Latino.\textsuperscript{14} Furthermore, Hispanic households tend to use their vouchers for longer periods of time when compared to white non—Hispanic voucher holders and Latinos in project-based assisted housing.\textsuperscript{15}

**HCV and Upward Mobility are Not Mutually Exclusive**

If HUD intends to advance economic opportunity of assisted households, there should be a greater commitment to move beneficiaries up the socioeconomic ladder and out of HUD-assisted housing.\textsuperscript{16}

In the United States, the “American dream” is often associated with upward mobility, or the opportunity to transition to a higher social and/or economic class.\textsuperscript{17} Upward mobility is fostered through various factors including education and employment attainment. However, for many Latinos in the U.S., poverty and low levels of education are barriers to advancing the socioeconomic ladder.

In the last year, over 12 million Hispanics lived below the poverty level and only about 40% (ages 25 years and older) have an educational attainment higher than a High School diploma or GED (See Figure 1).\textsuperscript{18}

As of 2017, 38% of Hispanics in the U.S. were born outside of the country.\textsuperscript{19} Particularly for poor Hispanic immigrant families, higher education and higher incomes are harder to achieve. When it comes to college attainment, first and second-generation Hispanic immigrants fare worse compared to Black and Asian immigrants (See Figure 2 on page three). Research also reveals that first-generation Hispanic immigrants have a median income of about $30,000—approximately $10,000 less than black immigrants and almost $30,000 less than their Asian counterparts.\textsuperscript{20} We have an opportunity to improve the HCV program by integrating education and workforce development resources for upward mobility and eventual exit of the program.

**Recommendations**

The following two recommendations are evaluated through effectiveness, equity, and political feasibility.

**Pair Vouchers with Resources from the Department of Education and the Department of Labor**

HUD should better serve HCV households by pairing vouchers with permanent education and workforce development support, rather than temporary and limited efforts through agency demonstrations such as FSS and Jobs Plus. However, HUD alone should not take on this responsibility. Both the Department of Labor (DOL) and the Department of Education (DOE) are dedicated agencies in these fields that are fully capable of contributing through a permanent interagency agreement. This concept would be modeled similarly after the HUD-Veterans Affairs Supportive Housing (HUD-VASH ) program which pairs HUD housing vouchers and case management and services from the Department of Veterans Affairs (VA) for homeless veterans.\textsuperscript{21} The agreement should connect DOE and DOL resources and services with PHAs to provide program funding, capacity and professional expertise to voucher recipients.

This proposal is very cost-effective because it would seek to maximize the use of existing federal funds. Currently, $17 billion are already spent on workforce development.\textsuperscript{22} Through stronger collaboration with the DOL we would be more effective at equipping some of the poorest families in our country with workforce development tools for a better chance to climb the socioeconomic ladder. Given the diverse educational needs amongst HCV households, the DOE’s current programs ranging from K-12, to adult education, to higher education that can also be beneficial.\textsuperscript{23} It is critical that our federal government be more effective in domestic spending while streamlining resources, that foster long-term educational and economic achievement, especially to communities that need it the most.

Through this proposal, we also address
inequities related to 1) the earning potential of HUD-assisted households, and 2) access to current HUD resources. For example, employed HUD-assisted individuals rarely “earn more than minimum wage” and many of those who are employed have part-time jobs rather than full-time. This shows a disparity in earning potential for HUD-assisted families and the need to prepare them through “high quality training” to level out the playing field and aim for higher-wage employment. On average, apprenticeship programs have a starting salary of $15 per hour and are usually a “learn on the job approach,” which would benefit voucher holders by having a job that quickly embarks them on a long-term increased earning path. In regards to HUD’s current resources, the Jobs Plus demonstration provides employment support which has been attributed to higher earned income among participants. Jobs Plus completely disregards additional earned income, whereas FSS requires the additional income to be contributed to an escrow account. However, the program is specifically for public housing families and excludes those who receive housing vouchers. On the education front, HUD and the DOE collaborate through Project SOAR which promotes the completion of the Free Application for Federal Student Aid (FAFSA) form. The program has been deemed successful, and often has been the primary source of college guidance for very low-income, first-generation, Latino college students. Nevertheless, Project SOAR targets youth in public housing. Through the proposed interagency agreement, Project SOAR should be made permanent and inclusive of youth in HCV households. Whether or not a student in HUD-assisted housing will receive FAFSA support, to afford and attend college, should not be determined by their housing assistance type.

A more educated and self-sufficient society, lower unemployment rates, a strong economy, and meeting the needs of our most vulnerable communities, are a few potential outcomes that make this proposal politically feasible. Policy decision-makers across our country, regardless of party affiliation or level of government, support the mission to foster education, ensure equal access and improve employment opportunities and wages. It would also fulfill the objectives of all three agencies – without requesting additional funding – while making a big push to alleviate poverty among HCV households.

**Figure 2. College Completion: 1st and 2nd Generation Immigrants**

While it is common to request...
additional funding for more vouchers, this proposal would ensure the HCV program effectively equips families with the resources they need for a strong foundation and successful HUD assistance exit, while making vouchers available for more of those in need. In the U.S., only one out of four eligible households receive federal housing assistance, and approximately three million HCV eligible families remain on waiting lists.\textsuperscript{35} It is clear that the demand is much greater than the supply. Just as the Housing First program is a wraparound HUD assistance entry model, the HCV program should have an equivalent path for program exits.\textsuperscript{36}

This approach would address inequities by including enrollee outcomes and a participant’s race in the SEMAP data reporting. It is vital that we know, on a regular basis, who is faring better or worse to make needed adjustments for equitable program exits. Race may be a critical factor in developing equitable opportunities to move up the socio-economic ladder, and currently not reported through programs that promote increased earned income such as Jobs Plus and FFS.

This is a politically feasible proposal because it helps mitigate risk of intergenerational poverty for HCV households. It is to our country’s benefit that we equip HCV households with resources and tools for fruitful and long-lasting program exits. At the same time, program exit goals will alleviate the HCV waiting lists while providing access to an affordable and safe home for more people in need.

\textbf{Conclusion}

By increasing collaboration and establishing an interagency agreement with the DOE and DOL to make education and workforce development resources a permanent component of the HCV program – rather than temporary or voluntary – there is an opportunity to actually “deliver services more effectively.”\textsuperscript{37} This is the most feasible proposal to quickly propel upward mobility for HCV households through existing resources and guided by stronger interagency collaboration. By doing this, we would be igniting upward mobility paths for all working age voucher holders. Since Latinos are the second fastest growing ethnic group in the U.S., we have a greater opportunity to make significant generational changes when it comes to HCV Latino households.\textsuperscript{38}

According to a survey of nonelderly and nondisabled tenants at four PHAs, 31% reported having a trade license or certificate, compared to 12% with a college degree and 24% lacking a high school diploma.

Of the nine participating PHAs, two serve a significantly high percentage of Latinos: City of Phoenix Housing Department (34%) and HACLA (28%).

Housing first is a HUD wraparound model for homeless families which provides stability by connecting individuals to a home as the first step in their recovery process.
